

GdiButton::OnMouseDown

GdiButton::OnMouseMove

GdiButton::OnMouseUp

GdiButton::HitTest

```
graph LR; A[GdiButton::OnMouseDown] --> D[GdiButton::HitTest]; B[GdiButton::OnMouseMove] --> D; C[GdiButton::OnMouseUp] --> D;
```

The diagram illustrates a design pattern where three distinct mouse event handling methods—GdiButton::OnMouseDown, GdiButton::OnMouseMove, and GdiButton::OnMouseUp—all delegate their logic to a single, shared method named GdiButton::HitTest. This is achieved through blue arrows pointing from each of the three event methods to the HitTest method, which is highlighted with a gray background.
